**Subject:** Re: Oct ARSG Meeting

Good Morning, All.

I hope that the special diurnal data from March-April 2014 is available for interpretation before this meeting. Thinking about it makes me wonder how I/we can get another of these special data sets for March-April 2015. Can we be thinking about it's usefulness, what sites (additional) would be more useful but still realistic given snow conditions, and what times of day would be best? Also, I am not able to reliably get flow measurements above Howardsville so is additional data meaningful with only chemistry? And, Barb, would there be \$ available again for additional sites next April-May? I am very open to making these happen if there is interest.

Thanks!

Lisa

Dear Stakeholders – We've decided that we don't have enough to discuss to hold a regular ARSG meeting in October. However, we would like to have a technical workgroup meeting sometime during the first two weeks of November. It will be held at the Public Lands Center in Durango, and there will be a conference phone.

Topics will include:

Reviewing metal loading data that we have from the Animas watershed above Silverton (tracer studies, sampling of draining mines, waste dumps, etc.)

Discussing ARSG priority sites for remediation outside of the Gladstone area, especially those on BLM land.

Updates on InnoCentive ideas and the possibility of pilot testing.

We will try to pick a date in November in the next few days, so if you have any strong preferences, please let me know.

I have also attached an updated Timeline. The opening of the Gold King will not happen this fall, EPA had some corrections regarding the wording of the risk assessment description, and I've added dates for the next Colorado Water Quality Commission Hearings regarding our basin.
